1711

DATE MAILED: 08/10/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/655,331

Applicant(s)

FALAAS ET AL.

Examiner

Melanie D. Bissett

Art Unit

1711

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 May 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 17-24, 27, 28 and 30-39 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 17-24, 27, 28 and 30-39 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 3/22/05.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: _____.

1. The rejections from the previous Office action have been altered to reflect the amended claims.

Claim Rejections - 35 USC § 102

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 17-18, 21, 23-24, 35-37, and 39 are rejected under 35 U.S.C. 102(b) as being anticipated by Nippon Carbide. The examiner refers to the English language equivalent of Nippon Carbide, Ochi et al.

4. From a prior Office action:

The reference teaches a laminated film resin comprising a PVC resin film, a polyurethane resin layer, and a metal layer adhering to the polyurethane layer (abstract). In this case, PVC serves as a clear coat protective layer (col. 9 lines 13-21). The metal layer is visible through the PVC and polyurethane layers (col. 2 lines 61-68). Metals for the metal layer include aluminum, gold, silver, nickel, and chromium (col. 14 lines 51-54). The polyurethane layer includes a crosslinking agent (col. 11 line 56-col. 12 line 5) and may also include colorants (col. 13 lines 3-6). Figures 1 and 2 show adhesive backings on the metal layer and release backings on the adhesive layer. Also, surface coatings are noted (col. 9 lines 22-24).

5. Additionally, the reference suggests blending the PVC material with urethane resins to form a clear protective layer (col. 4 lines 54-61). Also, the reference teaches printing and providing designs on the PVC layer using ink, thus suggesting printed messages, decorative patterns, and color layers on an outer surface of the polyurethane layer (col. 18 lines 1-9).
6. Regarding the limitations to the substrate derived from an aqueous dispersion and the polyurethane clear coat layer, if any, derived from a solvent-based layer, it is noted that these limitations follow product-by-process format. Since the solvent or

aqueous medium would not be present in the final article, which is claimed, it is the examiner's position that polyurethane layers formed by aqueous dispersions would be indistinguishable from those formed from solution.

Claim Rejections - 35 USC § 103

7. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

8. Claims 19-20 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nippon Carbide in view of Dunning et al.

9. From a prior Office action:

Nippon Carbide applies as above, teaching several metals for the metal layers but failing to mention the use of indium or tin materials or the use of primers. Dunning applies as above, where indium and tin materials are noted as equivalents to other metals, including nickel, silver, chromium, and aluminum (col. 2 lines 1-13). The metals are highly reflective and capable of being vacuum deposited. Thus, it is the examiner's position that it would have been prima facie obvious to use indium, tin, or alloys thereof in Nippon Carbide's invention with the expectancy of forming equally reflective and processible metal layers.

Also, Dunning teaches that primer layers can be used on the metal layer to improve adhesion between the laminate and the substrate to be bonded (col. 6 lines 14-35). Thus, it is the examiner's position that it would have been prima facie obvious to use a primer layer in the laminates of Nippon Carbide to improve adhesion to bonding substrates.

10. Claims 27-28, 30-31, and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dunning et al. in view of Kunevicius.

11. From a prior Office action:

Dunning teaches laminate structures comprising an adhesive layer, a visually continuous reflective metal layer, a polyurethane elastomeric film layer, and a release coated carrier layer (abstract, figure 1). The reference discusses reinforcing the opacity of the metal layer, indicating that the metal layer already contains a degree of opacity (col. 2 lines 46-48). Metals for the metal

Art Unit: 1711

layer include chromium, nickel, stainless steel, aluminum, tin, indium, silver, and alloys thereof (col. 2 lines 1-13). The elastomeric film is preferably transparent to allow the metal layer to show through (col. 4 lines 32-59).

Dunning applies as above, noting the application of PSA materials to the metal layer but failing to mention the use of an adhesive foam tape. Kunevicius teaches that foam tapes are used to apply molding materials to automobile body, where the foam serves to improve vibration absorption to prevent delamination (col. 4 lines 18-51). It is the examiner's position that it would have been prima facie obvious to use foam tapes as the adhesive in Dunning's invention to improve vibration absorption and prevent delamination.

12. Regarding the limitation to the substrate derived from an aqueous dispersion, it is noted that this limitation follows product-by-process format. Since the aqueous medium would not be present in the final article, which is claimed, it is the examiner's position that polyurethane layers formed by aqueous dispersions would be indistinguishable from those formed from the reference.

13. Claims 27-28, 30-34, and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nippon Carbide in view of Kunevicius.

14. From a prior Office action:

Nippon Carbide applies as above, noting the application of PSA materials to the metal layer but failing to mention the use of an adhesive foam tape. Kunevicius teaches that foam tapes are used to apply molding materials to automobile body, where the foam serves to improve vibration absorption to prevent delamination (col. 4 lines 18-51). It is the examiner's position that it would have been prima facie obvious to use foam tapes as the adhesive in Nippon Carbide's invention to improve vibration absorption and prevent delamination.

Double Patenting

15. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225

Art Unit: 1711

USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 17-23 and 37 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 6,071,621. Although the conflicting claims are not identical, they are not patentably distinct from each other because of substantially overlapping subject matter. Patented claim 1 recites a metallized film comprising a continuous, opaque metal layer in direct contact with an aliphatic polyurethane substrate, where the substrate is further defined. Patented claims 6-9 and 11 recite further color or clear coatings on the polyurethane substrate, where the metal layer is visible through the substrate and coating(s). Thus, the patented claims are encompassed by the limitations of present claims 17 and 23. The patented claims also recite the claimed metals, a crosslinking agent, and a primer layer.

Claims 24, 35-36, and 39 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 6,071,621 in view of Nippon Carbide. The patented claims apply as above, failing to mention backing layers or colorants used in the polyurethane substrate. Nippon Carbide (referenced by Ochi et al.) discloses laminate films comprising metal

Art Unit: 1711

layers, polyurethane resin layers, and a top resin layer. Nippon Carbide teaches that adhesive layers and release substrates are used to adhere the laminate to a substrate and to protect the laminate from contamination, respectively (col. 16 lines 1-22). Thus, it would have been obvious to include extra adhesive or backing substrate layers to the patented claims to improve adhesion and protection of the claimed laminates. Also, Nippon Carbide teaches coloring the polyurethane layer to achieve a desired appearance (col. 13 lines 3-6). It would have been obvious to add colorants to the claimed polyurethane resin layer to achieve a desired appearance.

Claims 27-28, 30-34, and 38 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 6,071,621 in view of Nippon Carbide and Kunevicius. Nippon Carbide and the patented claims apply as above, noting the application of PSA materials to the metal layer but failing to mention the use of an adhesive foam tape. Kunevicius teaches that foam tapes are used to apply molding materials to automobile body, where the foam serves to improve vibration absorption to prevent delamination (col. 4 lines 18-51). It is the examiner's position that it would have been prima facie obvious to use foam tapes as the adhesive in the invention to improve vibration absorption and prevent delamination.

Claims 17-39 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-14 of U.S. Patent No.

Art Unit: 1711

6,641,921. Although the conflicting claims are not identical, they are not patentably distinct from each other because of substantially overlapping subject matter. Patented claim 1 recites a metallized film comprising a continuous, opaque metal layer and a transparent polyurethane substrate, where the substrate is further defined. Patented claim 17 recite furthers color or clear coatings on the polyurethane substrate, where the metal layer is visible through the substrate and coating(s). Also, claims 9-10 and 14 recite backing and adhesive layers to be attached to the metal layer. Thus, the patented claims are encompassed by the limitations of present claims 1, 17, 9-10, and 14. The patented claims also recite the claimed metals, crosslinking agent, primer layer, and colorants.

Response to Arguments

16. Regarding the applicant's arguments that the Ochi reference does not teach the claimed invention, the examiner has pointed to passages from the reference that teach the amended limitations.

17. In response to the applicant's arguments that Kunevicius does not teach the claimed pressure sensitive adhesive foam tape, it is the examiner's position that the reference's teaching of a cellular cushion having a pressure-sensitive adhesive layer thereon constitutes a pressure sensitive adhesive foam tape. The reference teaches foam tape strips used to adhere a molding to an auto body part (col. 5 lines 31-41).

18. The double patenting rejections have been altered to reflect the amended claims.

Conclusion

19. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

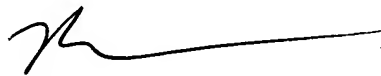

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melanie D. Bissett whose telephone number is (571) 272-1068. The examiner can normally be reached on M-F 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on (571) 272-1078. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
